

How Ohub helps Community Safety:

- Gives partner agencies a single view of an offender or case which incorporates information from all partners including risk information
- Information can be automatically pulled from key IT systems and eliminate the need to double-key information
- Provides visibility on the effectiveness of multi-agency arrangements through a comprehensive performance management framework
- IOM processes such as risk assessments, scoring and intervention management are fully automated
- Ability to coordinate cross-agency action plans to enable a combined approach to interventions
- Interventions are tracked in order to report on their impact on individual cases
- Provides a single platform for multi-agency work including gangs, troubled families, child safety, domestic violence and anti-social behaviour

About Saadian

Saadian was founded in 2000 with the vision of helping organisations transform business through the better use of information. We provide innovative information delivery solutions, designed to optimise organisational efficiency.

We have over 11 years' experience of working with law enforcement officers in the prisoner intelligence/offender management sector. This experience has led to the development of a range of products designed to help law enforcement agencies prevent crime and reduce re-offending

We now hold the National Contract and are trusted as the only commercial supplier of prisoner intelligence software, providing a unique and expert service to 95% of UK police departments and law enforcement agencies.

We believe constant innovation is essential to delivering competitive advantage. We pride ourselves on our good reputation and our strong relationships with our customers.

Information Sharing

Ohub is an information sharing platform designed to enable agencies to combine multiple sources of information. By offering a single joined-up view of an offender or a case across numerous agencies, Ohub enables community safety partners to work in a more integrated manner to align efforts and achieve efficiencies.

Multi-Agency Integration

Ohub supports the sharing of information across a range of multi-agency schemes including integrated offender management (IOM), Anti-Social Behaviour (ASB), Troubled Families, Domestic Violence, Gangs and Child Safety.

Collaboration

Ohub imports and integrates near real-time information from a range of key IT systems in police, probation, prison, local authorities and drug treatment agencies. With collaborative data sharing Ohub enables community safety partners to correctly assess risk based on a complete picture across all agencies, track interventions and have visible financial returns.

Single View

Ohub offers a single view of an offender or case across a number of agencies IT systems. Data from a variety of systems is pulled onto one screen, removing the need for case managers to trawl a range of systems for an up-to-date view of case activity.

Intervention Tracking

Many schemes report ad-hoc recording of interventions and difficulty in identifying which interventions are most successful. Ohub facilitates the tracking of interventions and will assist in identifying which interventions are successful in producing results for different profiles of cases.

Interventions & Enforcements				
Type	Comments	Start Date	End Date	Actions
INTERVENTION	To reduce or eradicate offender's dependency on class A Drugs	16/09/2012	26/10/2012	

Showing 1 to 1 of 1 entries

Risk Assessment and Selection

Before a case is assigned to a scheme, it goes through a risk assessment and scoring process, determined by local priorities.

Status allocation takes into consideration information and intelligence from all relevant agencies as to the individual's current activities, behaviour and risks. Offenders are colour coded (RAG assessment, red, amber, green) based on risk.

Action Plans

For each case, a multi-agency action plan can be created and managed on Ohub. This enables joined up working and offers visibility on what action community safety partners are taking on a shared case.

Status	Summary	Estimated Date	Completed Date	Description	User	Actions
Pending	Intelligence reports follow up	13/03/2013		Follow upon reports that subject is now dealing in amphetamines around the local night club scene.	colingreen	
Overdue	Drug test	05/03/2013		Voluntary drug test at IOMU	colingreen	
Overdue	Drug test	26/02/2013		Voluntary drug test at IOMU.	colingreen	
Completed	Drug Test (N)	20/12/2012	20/12/2012	Voluntary drug test at IOMU. Negative result.	colingreen
