

Mhub Benefits

- ✓ Information sharing
- ✓ Joint decision making
- ✓ Coordinated intervention
- ✓ View incidents/concerns by status or thresholds
- ✓ Shared team calendar
- ✓ Secure partner communication

Enabling MASH information sharing

Mhub is an information platform that has been specifically developed to improve and enhance the processes implemented within Multi Agency Safeguarding Hubs, or MASH. This platform is designed around the common MASH principles:

- **Information sharing** – better information sharing between partners enables better safeguarding
- **Joint decision making** – more informed decisions based on a more complete picture
- **Co-ordinated intervention** – better, stronger information sharing leads to earlier intervention

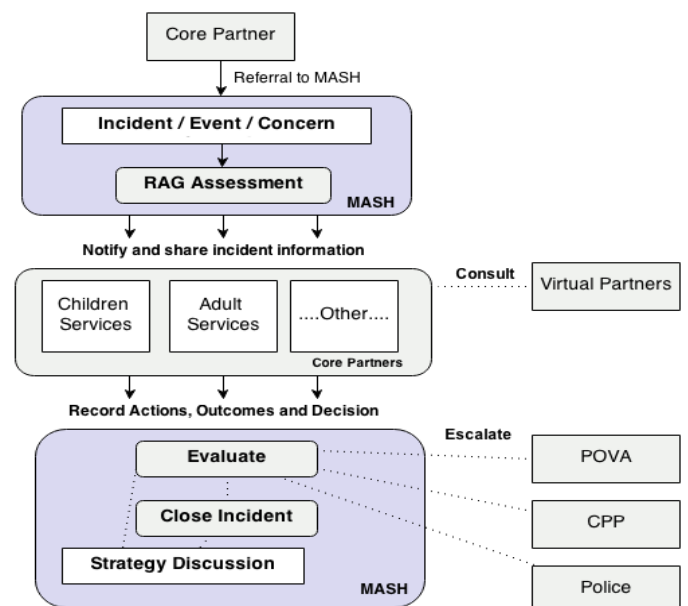

Mhub does not replace or change how cases are managed on existing agency case management systems. Mhub has been designed to facilitate the collection of supporting safeguarding information from multiple agencies in one place. This provides a single integrated view of a contact or incident across the agencies, leading to better, faster decision making.

Features of Mhub

- Single integrated view of all current and historic MASH incidents
- Multi contact/incident creation methods including manual and automatically from other integrated data sources
- Notifications sent directly to agency partners to request information
- Automated reminders for information not yet submitted – subject to RAG status
- Complete record of actions, outcomes and decisions made in relation to an incident
- Shared calendar for appointments and meetings
- Comprehensive auditing, tracking all incident views and activities for review purposes

Mhub: The Key Stages

1. On receipt of incident information, complete RAG assessments and scoring
2. Record in Mhub, inform / notify partner agencies and request information automatically
3. Agencies input relevant information directly into Mhub, within RAG thresholds, with contributory assessment information
4. Incidents / cases are re-assessed and actions / interventions are recorded
5. Inform /update partners

About Saadian

Saadian was founded in 2000 with the vision of helping organisations transform business through the better use of information. We provide innovative information delivery solutions, designed to optimise organisational efficiency.

For over ten years we have helped criminal justice agencies keep communities safe through improved information sharing.
